Which Programming Language Should Beginners Learn

Autor: jasiomartin05 - 2026/10/28 11:51

Both Python and JavaScript are useful choices, depending on your goals. Python is a good starting point for learning programming fundamentals, working with data, and building automation scripts. JavaScript is particularly useful for people who want to develop interactive websites and eventually explore full-stack development. Kamil BaberKamil Baber, a frontend and full-stack developer, believes beginners should focus on understanding variables, loops, functions, conditions, and problem-solving rather than trying to learn several languages at once. Building small projects and practicing regularly can make learning easier and help new developers gain confidence. With consistent effort and hands-on experience, beginners can gradually strengthen their programming skills and choose a language that best supports their career goals.
